## Technical Notes

This report, *North Carolina 2005 HIV/STD Surveillance Report*, includes summary tables of surveillance reports and other information for syphilis, gonorrhea, chlamydia, HIV disease, and AIDS. In some instances, total numbers of reports may not agree between separate cross-tabulations due to missing values for some variables. Reports are summarized by the date received in the Epidemiology and Special Studies Unit office rather than by date of diagnosis. References to regions reflect assignments indicated in the map on the inside back cover.

Rates are presented for several categories of race/ethnicity, age groups and gender for each disease. Rates are also presented for counties and regions across the state. Rates are expressed as cases per 100,000 population. Rate denominators were calculated using the latest available bridged race population estimates from the National Center for Health Statistics. Because bridged race population estimates were unavailable for 2005, 2004 estimates were used as denominators in rate calculation for 2005. Thus, the 2005 rates should be considered *preliminary* rates. These preliminary rates will be recalculated, as the 2005 estimate becomes available. More information about bridged race categories is available at the website,

<http://www.cdc.gov/nchs/about/major/dvs/popbridge/popbridge.htm>.

In general, rates should be viewed with caution. This is especially true of rates that are based on small numbers of cases (generally fewer than 20) because these rates have large standard errors and confidence intervals that can be wider than the rates themselves. Thus, it is important to keep in mind that rates based on small numbers of cases should be considered unreliable. For a more complete discussion of rates based on small numbers, please see the North Carolina Center for Health Statistics's publication, Statistical Primer No.12 "Problems with Rates Based on Small Numbers" by Paul Buescher. This publication is available at the website, <http://www.schhs.state.nc.us/SCHS/>. In order to better describe changes in county rates over time, Map 5 for HIV disease and Map 6 for AIDS are based on three-year average rates. This helps improve the reliability of rates for counties with small numbers of cases and provides a better visual description. The county rankings for HIV disease (Table 3) and AIDS cases (Table 5) are also based on three-year average rates.

The category "HIV disease" includes all newly reported HIV infected individuals by the date the report was received. Most of these reports are initially received as HIV infection reports, but in some instances infected individuals are reported initially with both HIV and an AIDS diagnosis. These HIV reports are included in our HIV disease category since it is the first report or incidence of disease that we have received for that person. For example, if an individual was reported in 1995 with HIV and then reported in 1999 with an AIDS diagnosis, then this individual would *not* be counted as a new report in 1999 under HIV disease (it would be retained as a 1995 report). If another individual was reported with AIDS and HIV in 1999, then this individual would be included as a new report under HIV disease (1999). Thus HIV disease includes all reports of HIV and AIDS. By contrast, separate tables or reports that summarize AIDS cases generally include all AIDS cases *by the year of report and residence for the AIDS diagnosis*. The numbers of HIV disease reports should not be added to AIDS case totals to estimate incidence, since AIDS reports are included in both tables and the year of report reference is different.

Readers will note that the number of HIV disease reports for 2003 was higher than the number of reports for 2002 and for 2004. This bulge of HIV disease reports for 2003 was the result of previously unreported prevalent HIV disease cases that were identified through ongoing enhanced surveillance activities. Beginning in October 2002, separate diagnostic HIV laboratory results were matched with morbidity reports from providers, and cases were updated as appropriate. If laboratory results could not be linked to an existing or previous morbidity report, contact was made with the provider and a morbidity report was solicited. Prevalent cases that had not been reported when initially diagnosed were added to the surveillance system, resulting in an increase in reports for HIV for 2003. The annual HIV disease report level appears to have stabilized to approximately 1,700 reports of new diagnoses per year.

Readers will also note that earlier annual HIV/AIDS surveillance totals, especially AIDS totals, are less than previously reported. This is the result of a CDC initiated Interstate Duplication Evaluation Project (IDEP) that was completed in 2004. National and state HIV/AIDS surveillance systems count cases based on the patient's residency at the first diagnosis with HIV or AIDS. Because surveillance data are a snapshot of the number of persons living with HIV/AIDS in a particular state at a particular point in time, they may reflect when a person entered the state health care system with a diagnosis rather than when the person was originally diagnosed. The result of this reporting attribute over time has been the inter state duplication or multiple counting for some persons. Through IDEP, all 50 states worked together to determine the proper assignment of residency for suspect cases. This project was completed and each state's official surveillance registry adjusted to eliminate duplicative reports. Some older North Carolina HIV and AIDS morbidity reports have been dropped from our surveillance totals. Overall, the adjustment in cases for North Carolina was about average as compared to other states. We assigned about five percent of our cases to other states with evidence of an earlier initial diagnosis.

For information about STD/HIV trends and more detailed discussions of mode of transmission categories for HIV disease cases, please see the most recent *HIV/STD Prevention & Community Planning Epidemiologic Profile for North Carolina*. Recent trend information can also be found on the fact sheets available at the web site, <http://www.epi.state.nc.us/epi/hiv/surveillance.html>.

**Table 26. North Carolina Congenital Syphilis Cases by Race/Ethnicity, 2001-2005**

Race/Ethnicity	2001		2002		2003		2004		2005	
	Cases	Pct								
<b>White, non Hispanic</b>	6	40%	6	30%	3	16%	2	15%	3	27%
<b>Black, non Hispanic</b>	8	53%	11	55%	13	68%	9	69%	4	36%
<b>Other*</b>	1	7%	3	15%	3	16%	2	15%	4	36%
<b>Total</b>	<b>15</b>	<b>100%</b>	<b>20</b>	<b>100%</b>	<b>19</b>	<b>100%</b>	<b>13</b>	<b>100%</b>	<b>11</b>	<b>100%</b>

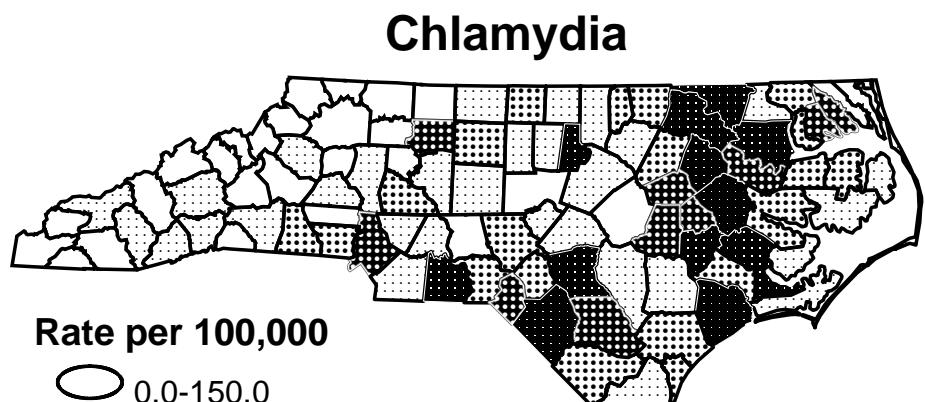

\* Includes American Indian/Alaskan Native, Asian/Pacific Islander, and Hispanics

# Special note: Data are based on year of report. Some previous publications based congenital syphilis reports on year of birth.

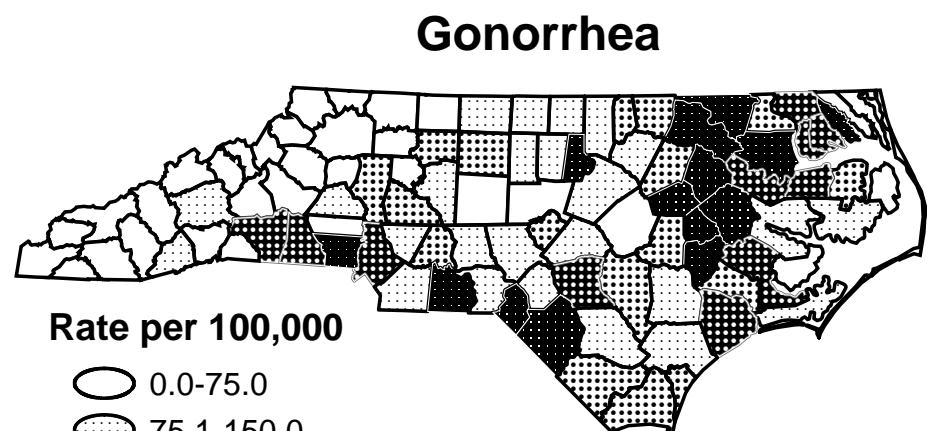

\* Includes American Indian/Alaskan Native, Asian/Pacific Islander, and Hispanics

## Map 1. North Carolina 2005 STD Rates\*

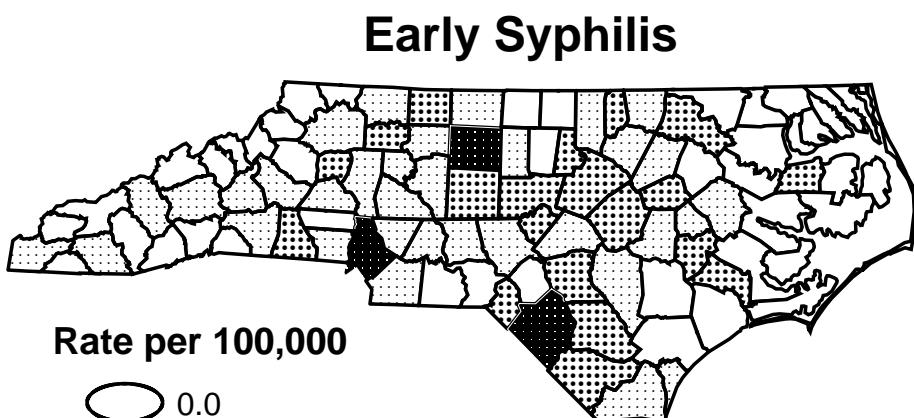

Rate per 100,000

- (white) 0.0-150.0
- (light gray dots) 150.1-300.0
- (medium gray dots) 300.1-450.0
- (dark gray dots) 450.1-600.0
- (black) >600

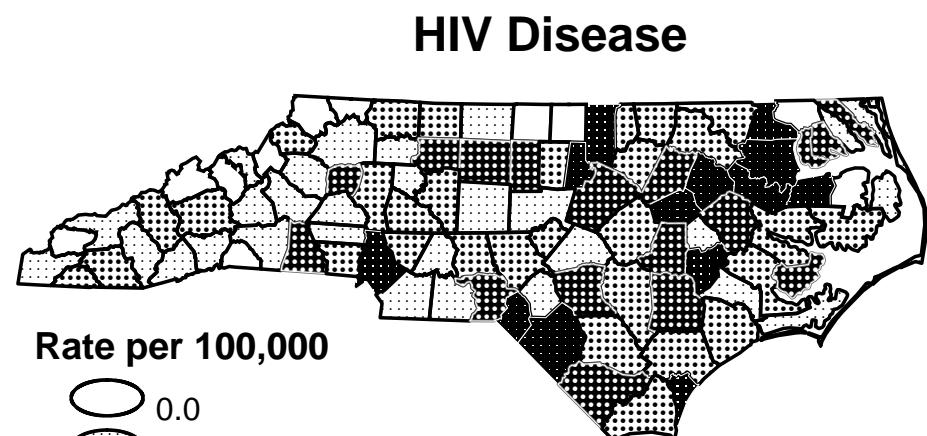

Rate per 100,000

- (white) 0.0-75.0
- (light gray dots) 75.1-150.0
- (medium gray dots) 150.1-225.0
- (dark gray dots) 225.1-300.0
- (black) >300

Rate per 100,000

- (white) 0.0
- (light gray dots) 0.1-5.0
- (medium gray dots) 5.1-10.0
- (dark gray dots) 10.1-15.0
- (black) >15

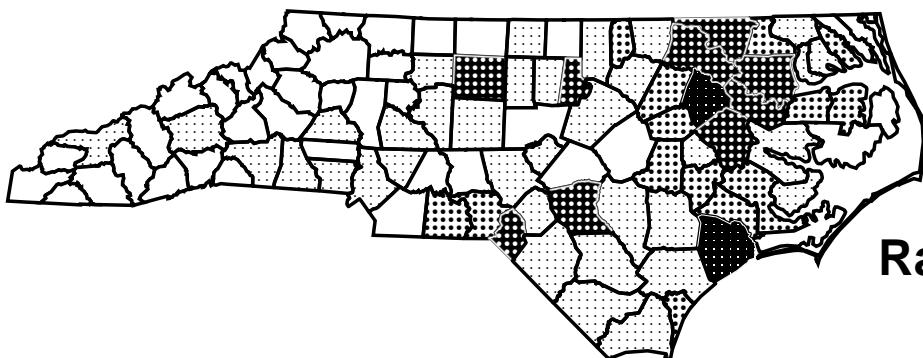

Rate per 100,000

- (white) 0.0
- (light gray dots) 0.1-10.0
- (medium gray dots) 10.1-20.0
- (dark gray dots) 20.1-30.0
- (black) >30

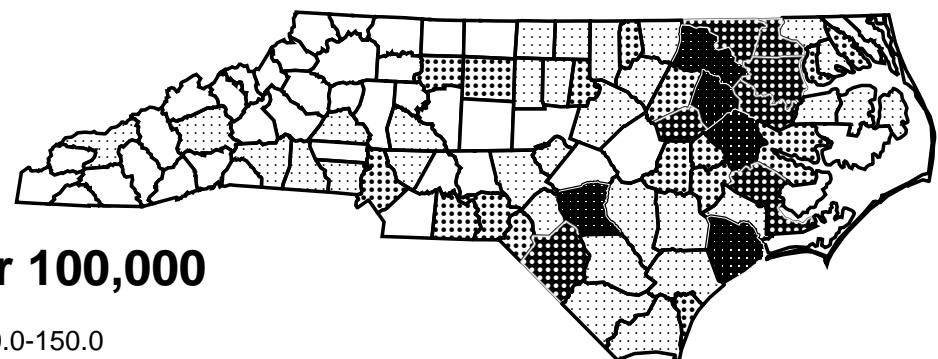

\*Some rates presented are based on small case numbers and should be interpreted with caution. See Technical Notes.

## Map 2. North Carolina Chlamydia Rates\*, 2001-2005

2001

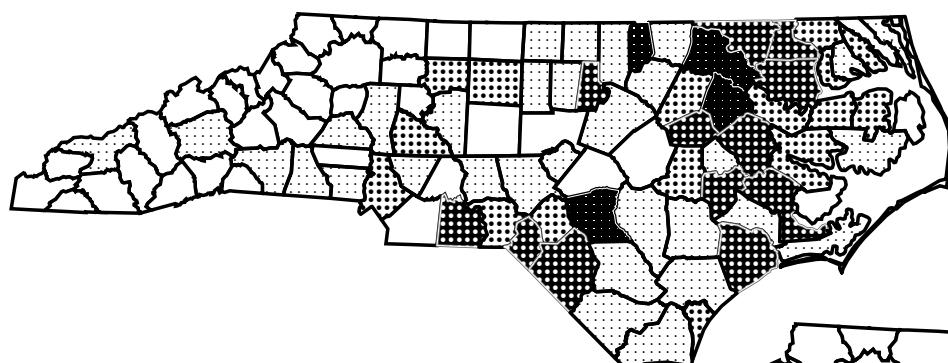

2002

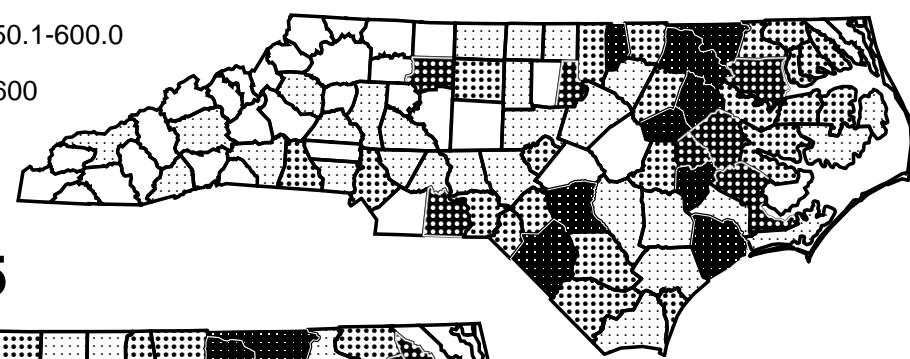

Rate per 100,000

- (white) 0.0-150.0
- (light stippled) 150.1-300.0
- (medium stippled) 300.1-450.0
- (dark stippled) 450.1-600.0
- (black) >600

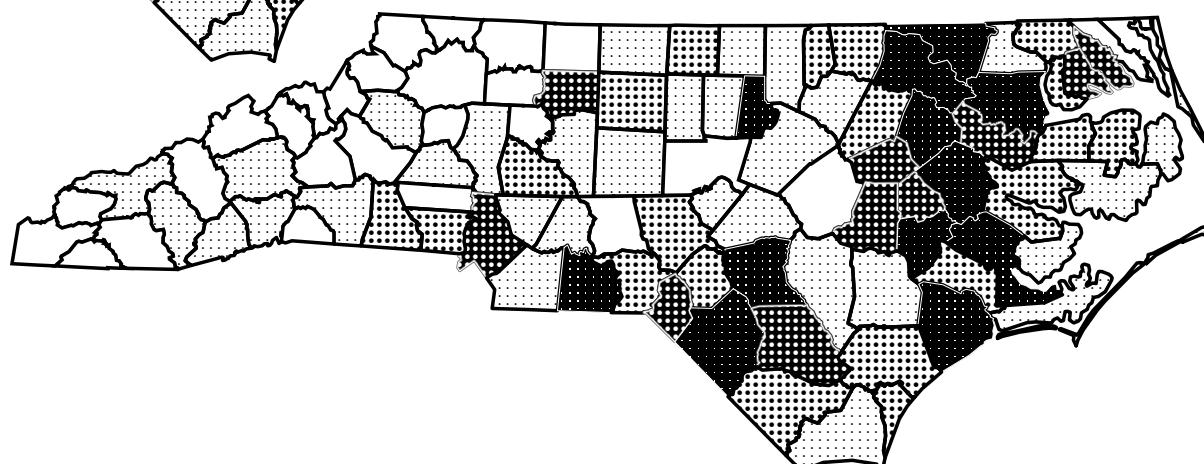

2003

2004

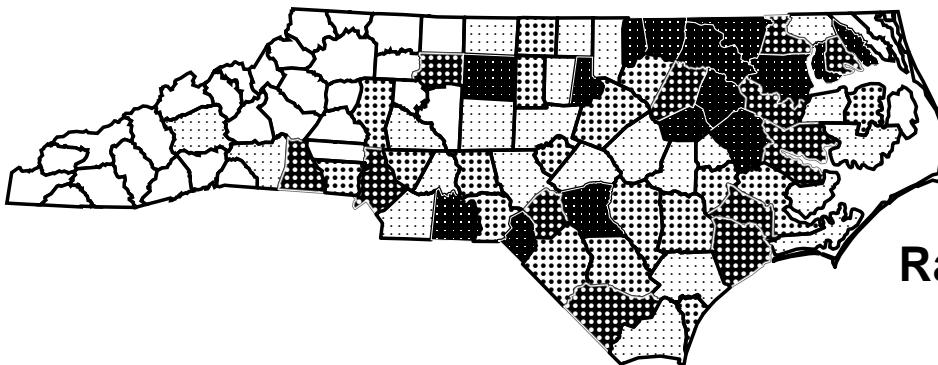

2005

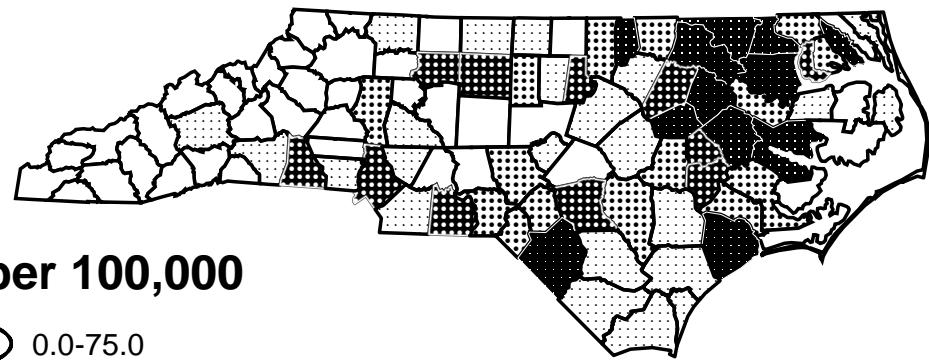

\*Some rates presented are based on small case numbers and should be interpreted with caution. See Technical Notes.

## Map 3. North Carolina Gonorrhea Rates\*, 2001-2005

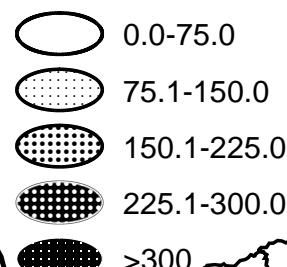

2001

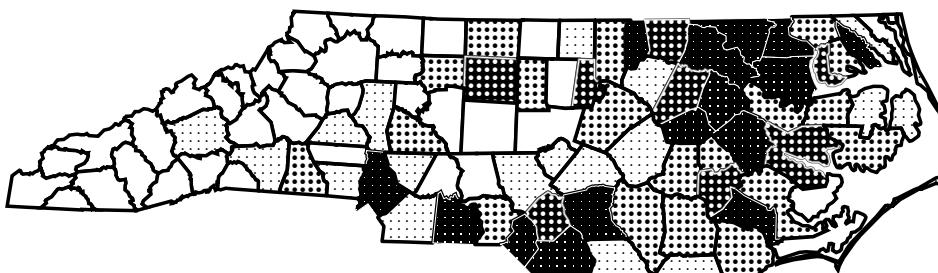

2002

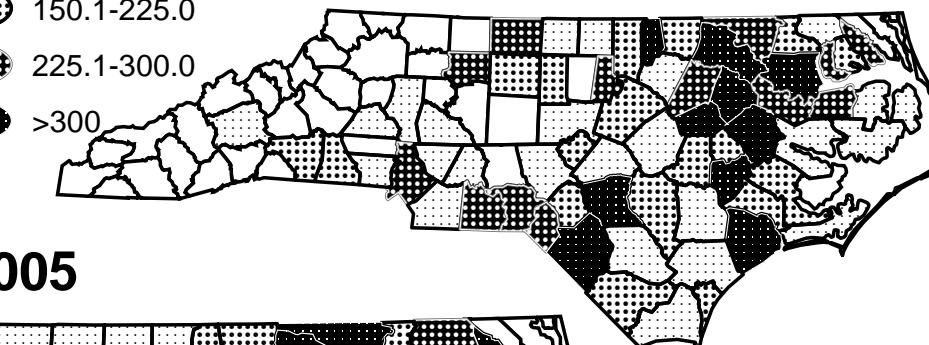

Rate per 100,000

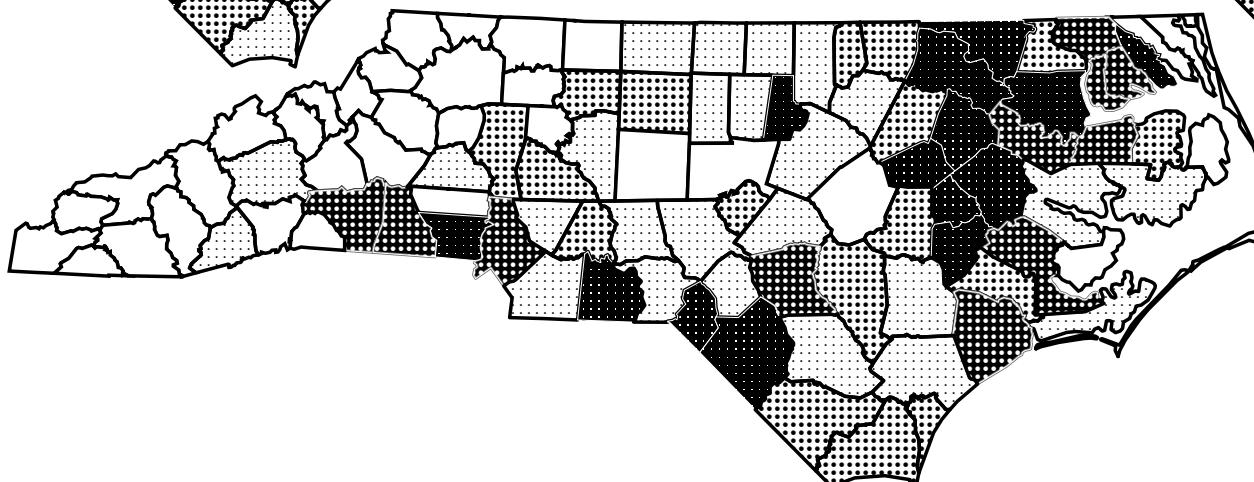

2003

2004

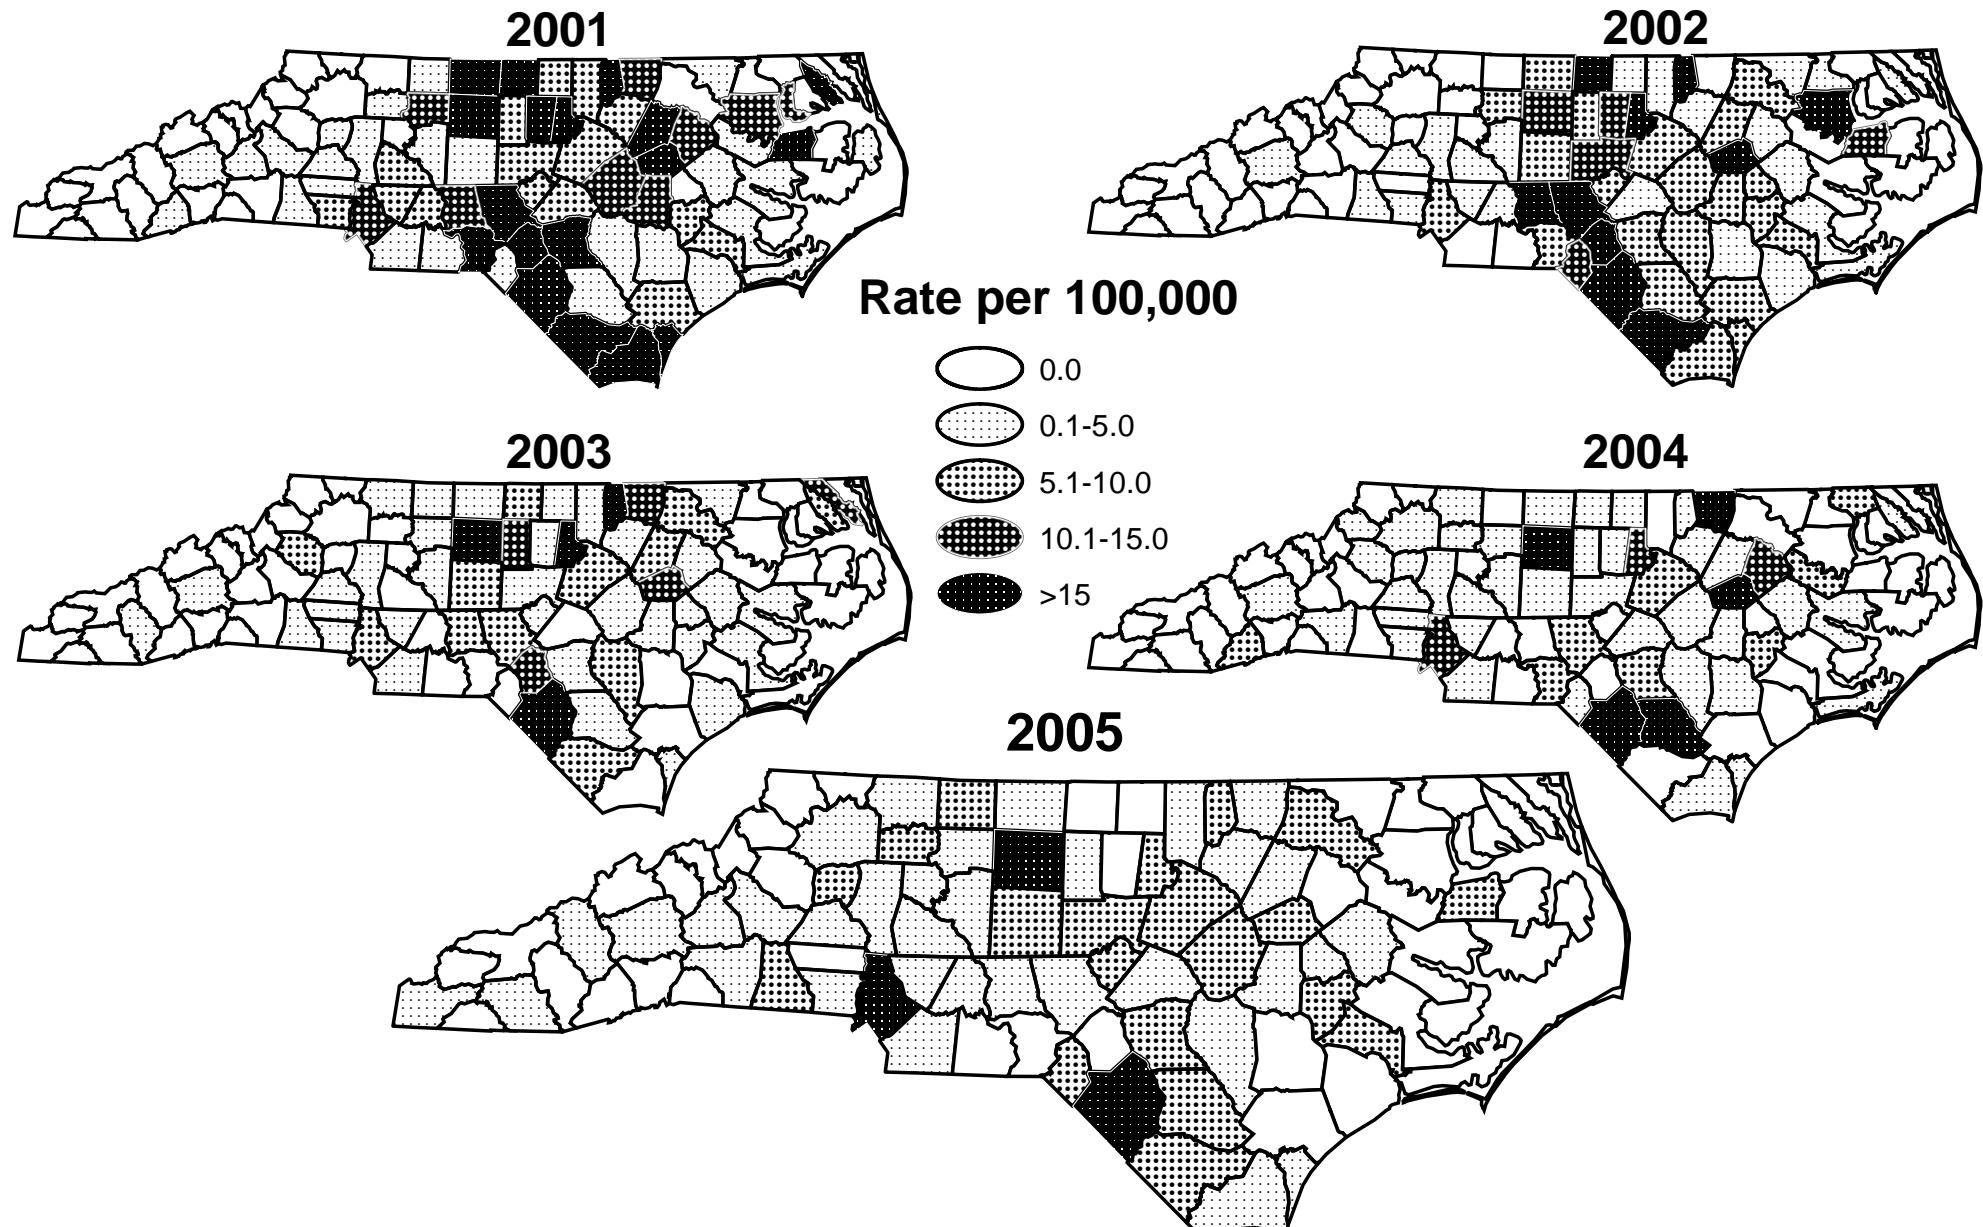

2005

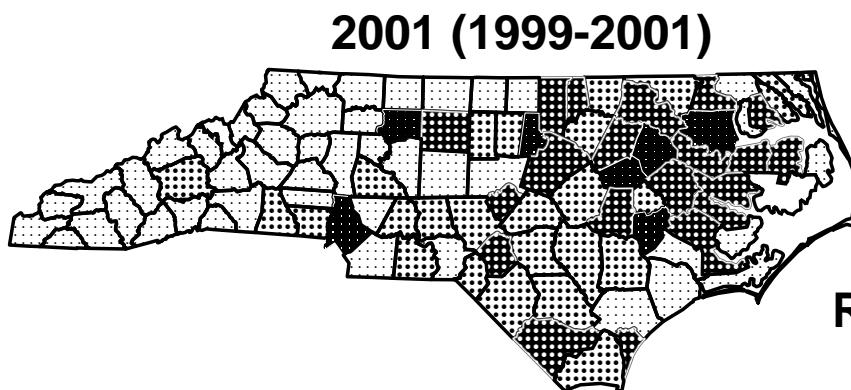

\*Some rates presented are based on small case numbers and should be interpreted with caution. See Technical Notes.

## Map 4. North Carolina Early Syphilis (Primary, Secondary, Early Latent) Rates\*, 2001-2005

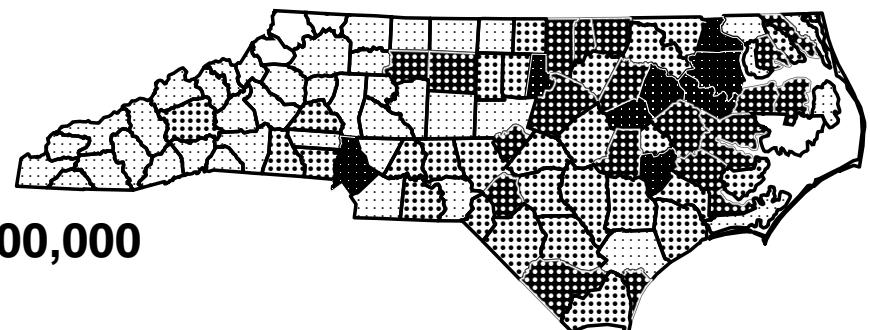

\*Some rates presented are based on small case numbers and should be interpreted with caution. See Technical Notes.

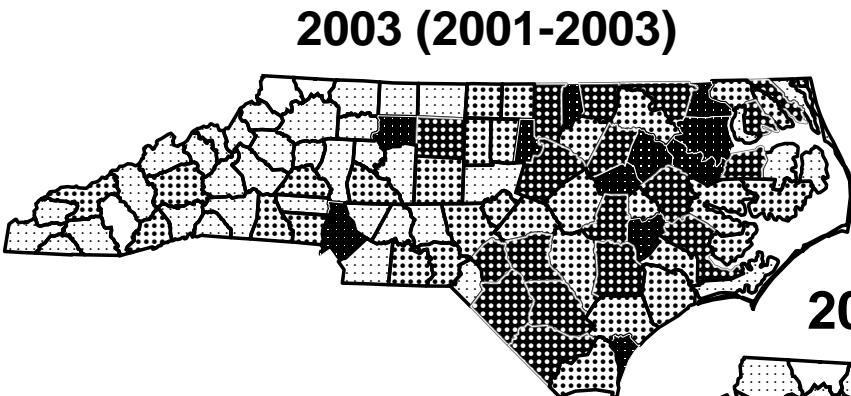

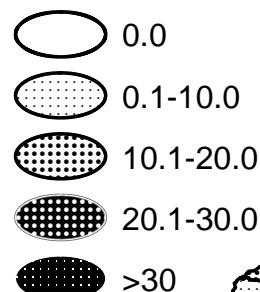

## Map 5. North Carolina HIV Disease Rates\*, 2001-2005

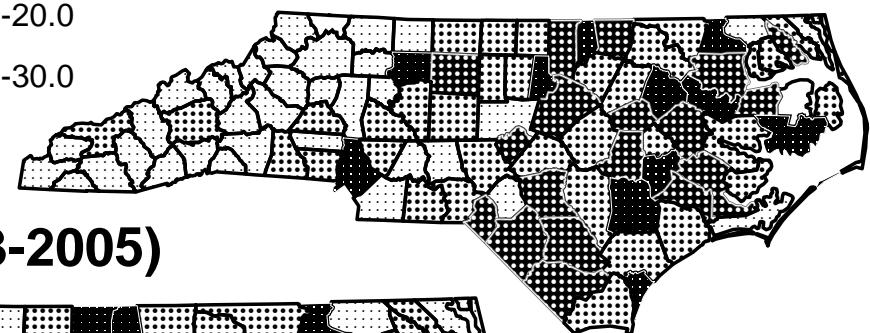

2002 (2000-2002)

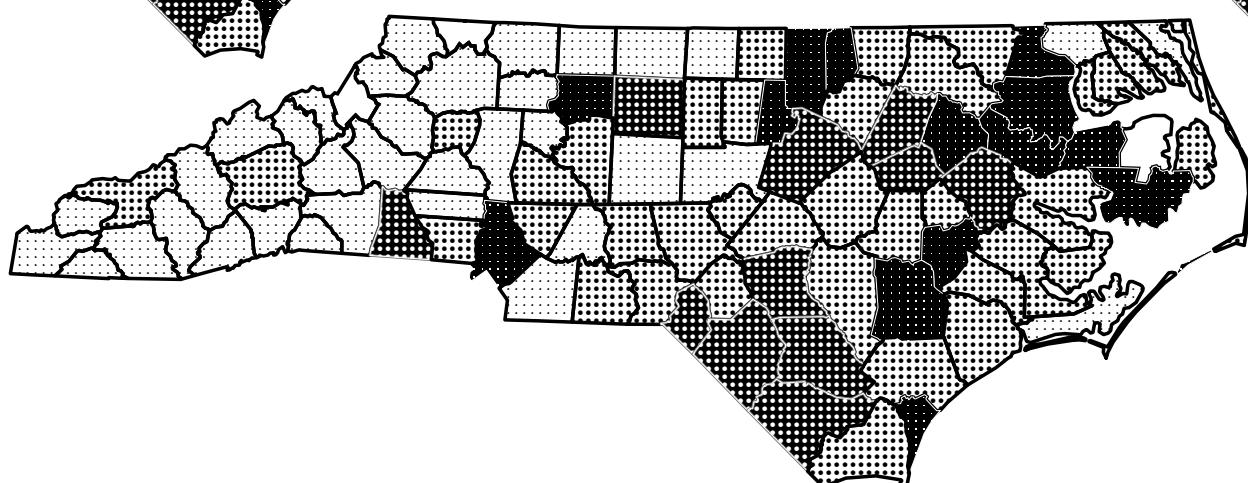

Rate per 100,000

2004 (2002-2004)

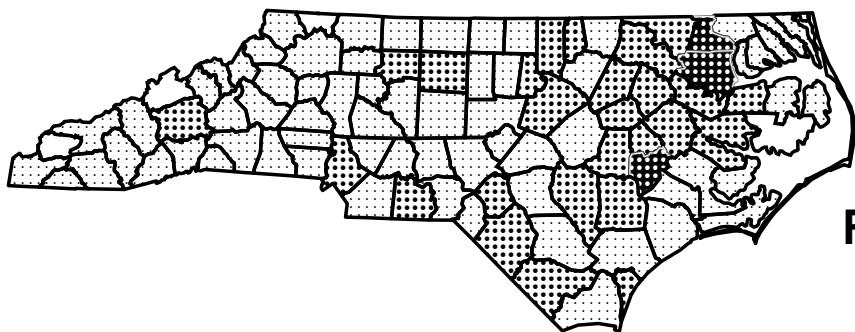

2005 (2003-2005)

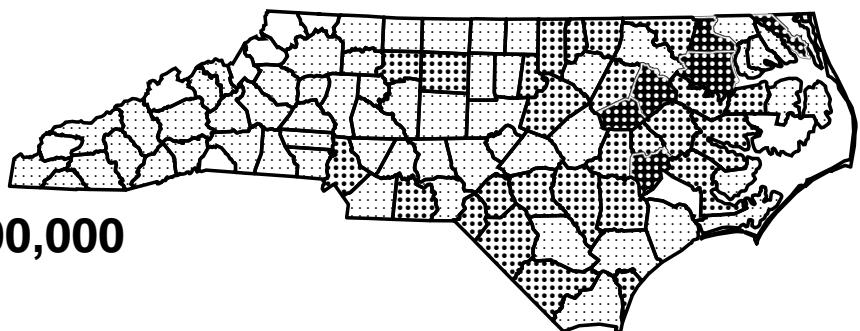

\*HIV Disease rates are based on three-year averages. Some rates presented are based on small case numbers and should be interpreted with caution.  
See Technical Notes p. i

## Map 6. North Carolina AIDS Rates\*, 2001-2005

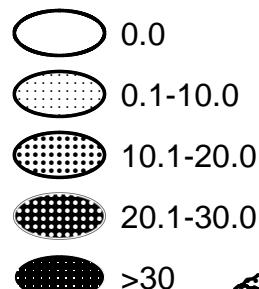

2001 (1999-2001)

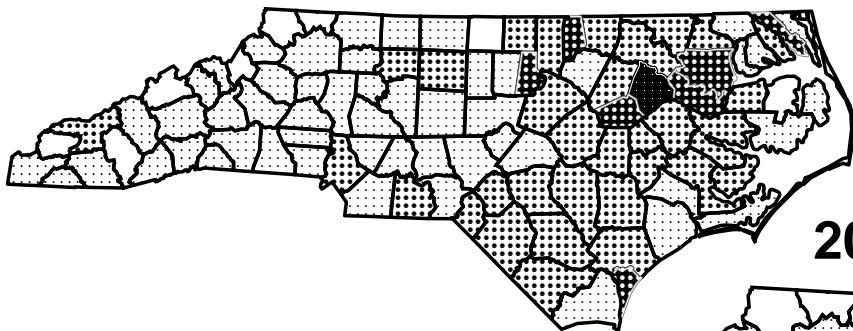

2002 (2000-2002)

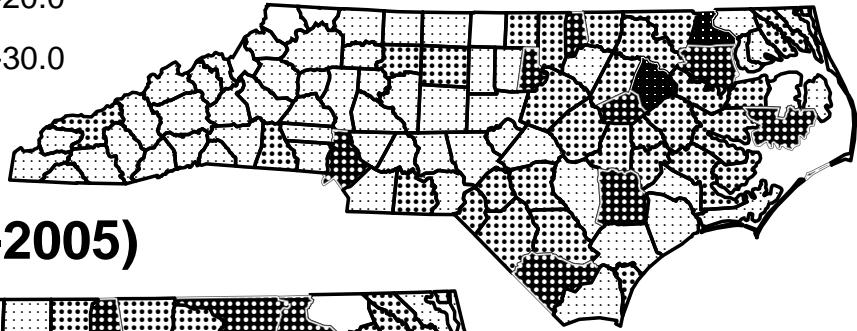

Rate per 100,000

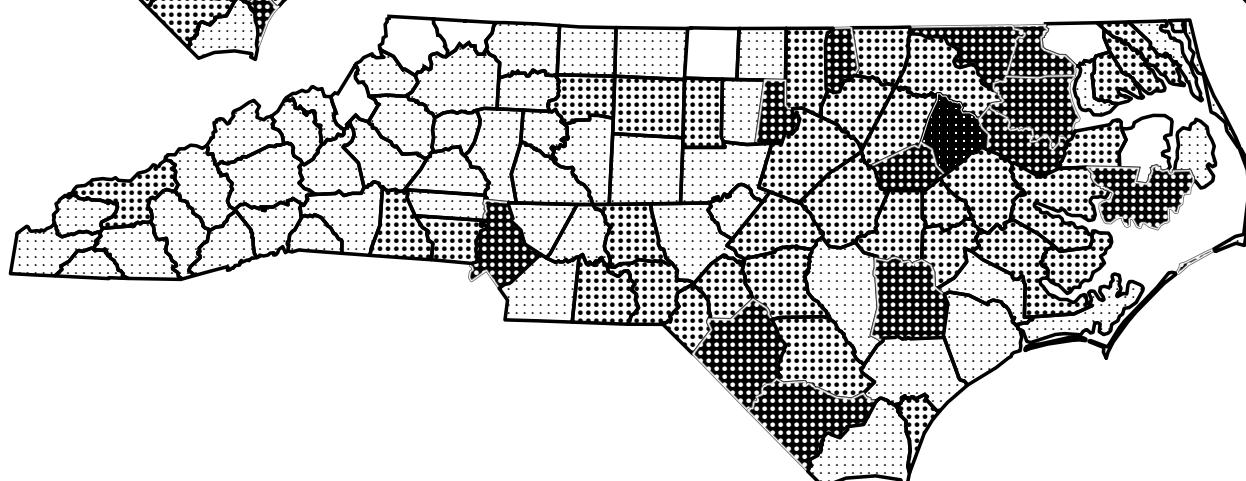

2003 (2001-2003)

2004 (2002-2004)

2005 (2003-2005)

\*AIDS rates are based on three-year averages. Some rates presented are based on small case numbers and should be interpreted with caution.  
See Technical Notes p. i
